

VP370

FLEET TRACKING DEVICE

The VP370 is our mid entry-level device, designed as a universal solution for 24/7 web-based visibility and continuous tracking. This real-time device functions on our 1, 2 and 5 minute rate plans.

The unit matches all features and functionality of its “sister” device (the VP390) with the exception of the embedded internal cellular and GPS antennas and remote door unlock feature. This design change offers greater flexibility with installation and makes tampering with the device more difficult (no harness adapters or plugs).

Target Markets:

- Most general businesses, plus those that require I/O input/starter disable
- Areas susceptible to weak cell coverage, thanks to the unit’s extended memory capacity

Product Differentiators:

- Starter disable
- PTO input
- Extended store-and-forward capacity
- Internal GPS/cellular antenna

- Memory retains 3,000 locations for store/forward capability
- Voltage monitoring and low battery notification
- Dual Input ready: connect to a PTO or any digital sensor
- Capable of supporting starter disable
- GSM Quad-band (800/900/1800/1900 MHz)
